

SafeCom Smart Printing

Companies worry about costs and security

Today finance and IT managers know they must consolidate, standardize and control their printing operations in order to reduce costs and simplify working patterns. In addition, employees must be able to print safely anytime, anywhere at any network printer of their choice.

SafeCom Smart Printing meets these demands with savings of 40% or more due to:

- Infrastructure consolidation by reducing number of printers and print servers
- Reducing consumable usage with PullPrinting and policy compliance
- Efficient IT management with a centralized administration of users and devices
- Accurate cost allocation by registering all print, copy, scan and fax activities
- Confidential printing - print safely anytime, anywhere

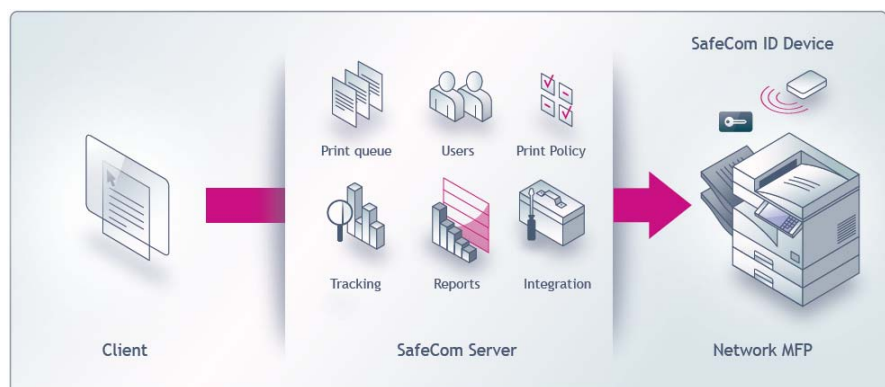

Optimize print services and print safely

SafeCom Smart Printing is the solution most companies need to control and optimize their print environment since it provides:

- Central administration of users and devices to optimize operations
- Document accounting of all print, copy, fax, e-mail and scan activities
- Access control protecting devices and ensuring confidential printing
- Policy compliance motivating changes in user behaviour and reducing waste

Save 40% or more

SafeCom Smart Printing enables enterprises to consolidate their print infrastructure, simplify operations and reduce operational costs.

A SafeCom-enabled network printer allows users to send prints and then authenticate at any printer to collect it.

Consolidate print infrastructure

No need for personal printers - SafeCom PullPrint allows for printer fleet consolidation and eliminates the need for personal printers by turning all network printers into personal printers. Users send their print and go to any network printer to authenticate and retrieve it.

Reduce number of print servers - Enterprises with remote offices and limited network bandwidth can reduce the number of print servers drastically. Pending print jobs are stored locally on the user's computer until he or she authenticates to retrieve the document. All print data traffic is removed from the corporate network.

A modular approach

SafeCom Smart Printing is an open universe of possibilities. It is built on a foundation that allows choice of optional core components. The system can be configured with a customized set of functionalities and modules to create the exact solution matching your specific requirements.

Reduce consumable usage

SafeCom PullPrint and policy compliance are effective for eliminating the piles of forgotten or rejected prints - saving the company 40% or more.

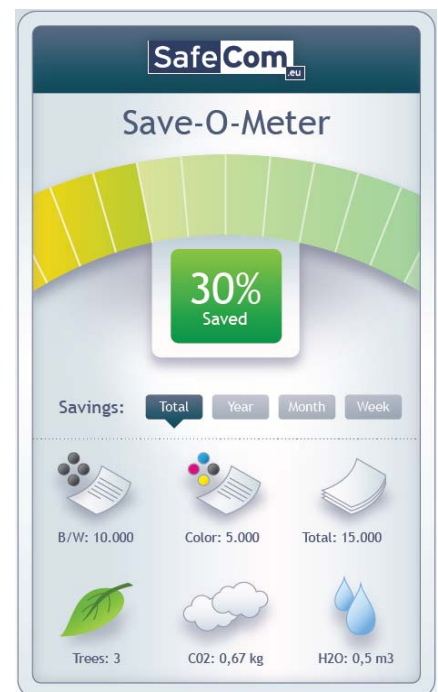

Let the users decide - with SafeCom PullPrint users decide which print jobs to print or delete. In combination with auto-deletion of forgotten print jobs this may reduce paper and toner costs by up to 15%.

Motivate and manage - policy enforcement enables management of changes in user behavior through the optimization of duplex and color printing - reducing waste and saving up to 25%.

Visualize your saving

SafeCom tracking and standard reporting capabilities make it possible to gain a clear overview of your company's print activities, print behavior and costs in order to control printing expenses, no matter how large the organization is.

Most importantly the SafeCom Save-O-Meter shows you how many trees and how much water and CO2 your organization has saved. The Save-O-Meter is an integrated part of the central management system.

World leader in modular print solutions

SafeCom solutions are known for their ability to offer companies and organizations a better way to manage and optimize their printing services.

With SafeCom Smart Printing companies all over the world are cutting costs, increasing efficiency, boosting security, reducing waste and protecting the environment.

SafeCom Smart Printing solutions work with all types of printers, copiers and multifunction devices; in small offices as well as large enterprises.
